

ENGINEERING SCIENCE

Job title	Postdoctoral Research Assistant in Applied Machine Learning
Division	Mathematical, Physical and Life Sciences Division
Department	Engineering Science (Information Engineering)
Location	Central Oxford
Grade and salary	Grade 7: £31,604 - £38,833 per annum
Hours	Full time
Contract type	Fixed-term for 24months
Reporting to	Stephen Roberts, Michael Osborne
Vacancy reference	131152
Additional information	This position is funded in association with the Oxford-Emirates Data Science Lab Reimbursement of relocation costs for postdoctoral positions is only available where allowed on the project.

The role

The Oxford Researcher on this project will be drawn from within the areas of Mathematics and/or Information Engineering (Machine Learning and Artificial Intelligence). They will spend their time working on Emirates-focused research and will act as a bridge between the Emirates-focused research activities and Oxford research groups. The Researcher will engage in internationally leading research in analysis of complex, dynamic data at scale; he/she will bring state of the art machine learning to the heart of industrial scale data analytics.

Responsibilities/Duties

You will be responsible for research into:

- Efficient machine learning, particularly for unstructured data;
- Online anomaly, changepoint and bias detection;
- Structure learning for high-dimensional time-series data, including networks;
- Understanding dynamic, complex data and networks.

Moreover, you will have to:

- Manage your own research activities. This involves small scale project management and co-ordinating multiple aspects of work to meet deadlines;
- Organise regular workshops and project meetings;

- Work closely with researchers and industrial partners at the collaborating institutions as well as help supervise DPhil/MEng students in Oxford in furthering the objectives of the project;
- Report regularly on progress to members of the team;
- Act as a source of information and advice to other members of the group
- Write reports on the research and publish these as papers in leading conferences and journals;
- Present the results to academic and industrial partners, as well as the public;
- Update and maintain a website for the project;
- Develop ideas for generating research income, and present detailed research proposals to senior researchers;
- The PDRA may have the opportunity to teach or undertake ad-hoc paid teaching (this includes lecturing, demonstrating, small-group teaching, tutoring of undergraduates and graduate students and supervision of masters projects in collaboration with principal investigators).

Selection criteria

Essential

- A good first degree in Engineering, Mathematics/Statistics, Computer Science or equivalent;
- Have (or about to complete) a PhD in a relevant area;
- Experience in Bayesian inference and machine learning;
- Previous experience with the practical implementation of Bayesian models on real-world data;
- Expertise and experience in computer programming;
- Track record of published work concomitant with experience;
- Ability to work well independently and as part of a team, as well as to possess interpersonal skills necessary to contribute effectively to a collaborative project.

Desirable

- Previous experience with probabilistic fault-, anomaly- and/or changepoint-detection methods;
- Previous experience in network models;
- Previous experience with models for high-dimensional data;
- Previous experience of working in a team with industry.

About the University of Oxford

Welcome to the University of Oxford. We aim to lead the world in research and education for the benefit of society both in the UK and globally. Oxford's researchers engage with academic, commercial and cultural partners across the world to stimulate high-quality research and enable innovation through a broad range of social, policy and economic impacts.

We believe our strengths lie both in empowering individuals and teams to address fundamental questions of global significance, and in providing all of our staff with a welcoming and inclusive workplace that supports everyone to develop and do their best work. Recognising that diversity is a great strength, and vital for innovation and creativity, we aspire to build a truly diverse community which values and respects every individual's unique contribution.

While we have long traditions of scholarship, we are also forward-looking, creative and cutting-edge. Oxford is one of Europe's most entrepreneurial universities. Income from external research contracts in 2014/15 exceeded £522.9m and ranked first in the UK for university spin-outs, with more than 130 spin-off companies created to date. We are also recognised as leaders in support for social enterprise.

Join us and you will find a unique, democratic and international community, a great range of staff benefits and access to a vibrant array of cultural activities in the beautiful city of Oxford.

For more information please visit www.ox.ac.uk/about/organisation

Engineering Science Department

Engineering teaching and research takes place at Oxford in a unified Department of Engineering Science whose academic staff are committed to a common engineering foundation as well as to advanced work in their own specialities, which include most branches of the subject. We have especially strong links with computing, materials science and medicine. The Department employs about 90 academic staff (this number includes 13 statutory Professors appointed in the main branches of the discipline, and 25 other professors in the Department); in addition there are 9 Visiting Professors. There is an experienced team of teaching support staff, clerical staff and technicians. The Department has well-equipped laboratories and workshops, which together with offices, lecture theatres, library and other facilities have a net floor area of about 22,000 square metres. The Department is ranked third in the world in the latest *Times Higher Education World University Rankings*, behind Caltech and Stanford, but ahead of MIT (4th), Cambridge (5th), Princeton (6th) and Imperial (7th).

Teaching

We aim to admit 160-170 undergraduates per year, all of whom take a 4-year Engineering Science course leading to the MEng degree. The course is accredited at MEng level by the major engineering institutions. The syllabus has a common core extending through the first two years. Specialist options are introduced in the third year, and the fourth year includes further specialist material and a major project.

Research

The Department was ranked the top engineering department in the UK, as measured by overall GPA, in the Research Excellence Framework 2014 exercise. We have approximately 350

research students and about 130 Research Fellows and Postdoctoral researchers. Direct funding of research grants and contracts, from a variety of sources, amounts to an annual turnover of approximately £19m in addition to general turnover of about £18m. The research activities of the department fall into seven broad headings, though there is much overlapping in practice: Thermofluids; Materials and Mechanics; Civil and Offshore; Information, Control and Vision; Electrical and Optoelectronic; Chemical and Process; Biomedical Engineering.

For more information please visit:

<http://www.eng.ox.ac.uk/>

Information Engineering

This grouping maintains dedicated teams in four fields: computer vision and image understanding; mobile robotics and automation; machine learning; and control engineering and systems. We address a wide array of information engineering questions, exploring both fundamental research and high impact applications. For example, our work on image understanding will make the entire BBC photo archive searchable, with the ultimate aim of categorising every image on the internet. Robotics research is delivering high impact in autonomous transport and warehouse automation, while work on machine learning and big data is tackling problems as diverse as water management and exo-planet detection. Our active-vision experts have, through their pioneering PTAM virtual reality system, moved real-time computer vision from desktop into the pocket. Our dynamics and optimal control work has resulted in research with, and support from Ferrari Formula One on minimum lap-time simulation, driver simulator design and the control of the 2014 power train. Research on complex network systems, meanwhile, is advancing our understanding and control of cell signalling pathways paving the way towards personalised medicine and better drugs.

The Machine Learning Research group unites pioneering work on foundational machine learning topics with the application of that work to applications motivated by great societal and scientific challenges. In particular, our work on machine intelligence promises technologies that will free the potential of human intelligence. The group develops systems that can provide decision making upon data at a scale beyond the human, while realising the benefits of subtle human judgement and creativity. Our work has found impact in vast data arenas, such as *Zooniverse* (where it is used to optimally combine millions of decisions). The group has also led the development of Probabilistic Numerics, an approach to machine learning that introduces intelligence to every level of an algorithmic pipeline. Specifically, this approach augments existing high-level machine learning models with intelligent numerical techniques, ensuring modularity and the correct propagation of decisions through the system. This work has found application in domains ranging from astronomy to zoology. In the former, the group's work has been incorporated into NASA's *Kepler space telescope* pipeline for the detection of planets in distant solar systems as well as forming the core of the vast data analyses in such projects as the *Square Kilometre Array*; in the latter, it has led to winning high-profile funding such as the *Google Impact Challenge* to detect disease-bearing mosquitoes. The group has also addressed the broader societal consequences of machine learning and robotics, working to analyse how intelligent algorithms might soon substitute for human workers, and predicting the resulting impact on employment. This work has enjoyed broad media coverage (featured in the BBC, CNN, The Economist, Financial Times, Wall Street Journal, New York Times, Washington Post, Der Spiegel, Scientific American, TIME Magazine).

The Oxford-Emirates Data Science Lab

Emirates and the University of Oxford have entered into a strategic partnership to create the Oxford-Emirates Data Science Lab. The initial term of the agreement is five years. Work within the Lab will focus on projects and areas of research specific to Emirates and of scientific interest to Oxford. The lab will draw on data science, machine learning, mathematics and big

data to help Emirates place data at the heart of the organisation and streamline business processes. The Lab is tasked with examining new ways of forecasting demand and optimising seat inventory across the airline's global network to drive immediate, tangible revenue benefits to the Emirates Group. Longer term, the Lab's focus will be to redefine the customer experience through improved personalisation with individual customers. Part of the recently-launched Emirates Group Enterprise-Wide Transformation strategy, the Lab will support the whole Group, including Emirates airline, Emirates SkyCargo and dnata, the air services provider.

The University of Oxford is a member of the [Athena SWAN Charter](#) and holds an institutional Bronze Athena SWAN award. The Department of Engineering Science holds a Departmental Bronze Athena award in recognition of its efforts to introduce organisational and cultural practices that promote gender equality in SET and create a better working environment for both men and women.

The University of Oxford is also a corporate member of WISE.

The Mathematical, Physical, and Life Sciences Division

The Mathematical, Physical, and Life Sciences (MPLS) Division is one of the four academic divisions of the University. In the results of the six-yearly UK-wide assessment of university research, REF2014, the MPLS division received the highest overall grade point average (GPA) and the highest GPA for outputs. We received the highest proportion of 4* outputs, and the highest proportion of 4* activity overall. More than 50 per cent of MPLS activity was assessed as world leading.

The MPLS Division's 10 departments and 3 interdisciplinary units span the full spectrum of the mathematical, computational, physical, engineering and life sciences, and undertake both fundamental research and cutting-edge applied work. Our research addresses major societal and technological challenges and is increasingly focused on key interdisciplinary issues. MPLS is proud to be the home of some of the most creative and innovative scientific thinkers and leaders working in academe. We have a strong tradition of attracting and nurturing the very best early career researchers who regularly secure prestigious fellowships

We have around 6,000 students and play a major role in training the next generation of leading scientists. Oxford's international reputation for excellence in teaching is reflected in its position at the top of the major league tables and subject assessments.

MPLS is dedicated to bringing the wonder and potential of science to the attention of audiences far beyond the world of academia. We have a strong commitment to supporting public engagement in science through initiatives including the Oxford Sparks portal (<http://www.oxfordsparks.net/>) and a large variety of outreach activities. We also endeavour to bring the potential of our scientific efforts forward for practical and beneficial application to the

real world and our desire is to link our best scientific minds with industry and public policy makers.

For more information about the MPLS division, please visit: <http://www.mpls.ox.ac.uk/>

How to apply

Before submitting an application, you may find it helpful to read the 'Tips on applying for a job at the University of Oxford' document, at www.ox.ac.uk/about/jobs/supportandtechnical/.

If you would like to apply, click on the **Apply Now** button on the 'Job Details' page and follow the on-screen instructions to register as a new user or log-in if you have applied previously. Please provide details of two referees and indicate whether we can contact them now.

You must upload a CV and a supporting statement. The supporting statement should explain how you meet the selection criteria for the post using examples of your skills and experience. This may include experience gained in employment, education, or during career breaks (such as time out to care for dependants).

Your application will be judged solely on the basis of how you demonstrate that you meet the selection criteria stated in the job description.

References

Please give the details of people who can provide a reference for you. If you have previously been employed, your referees should be people who have managed you, and at least one of them should be your formal line manager in your most recent or current job. Otherwise they may be people who have supervised you in a recent college, school, or voluntary experience. It is helpful if you can tell us briefly how each referee knows you (e.g. 'line manager', 'college tutor'). Your referees should not be related to you.

We will assume that we may approach them at any stage unless you tell us otherwise. If you wish us to ask for your permission before approaching a particular referee, or to contact them only under certain circumstances (for example, if you are called to interview) you must state this explicitly alongside the details of the relevant referee(s).

Please upload all documents **as PDF files** with your name and the document type in the filename.

All applications must be received by **midday** on the closing date stated in the online advertisement.

Information for priority candidates

A priority candidate is a University employee who is seeking redeployment because they have been advised that they are at risk of redundancy, or on grounds of ill-health/disability. Priority candidates are issued with a redeployment letter by their employing departments.

If you are a priority candidate, please ensure that you attach your redeployment letter to your application (or email it to the contact address on the advert if the application form used for the vacancy does not allow attachments)

Should you experience any difficulties using the online application system, please email recruitment.support@admin.ox.ac.uk. Further help and support is available from

www.ox.ac.uk/about_the_university/jobs/support/. To return to the online application at any stage, please go to: www.recruit.ox.ac.uk.

Please note that you will be notified of the progress of your application by automatic emails from our e-recruitment system. **Please check your spam/junk mail** regularly to ensure that you receive all emails.

Important information for candidates

Pre-employment screening

Please note that the appointment of the successful candidate will be subject to standard pre-employment screening, as applicable to the post. This will include right-to-work, proof of identity and references. We advise all applicants to read the candidate notes on the University's pre-employment screening procedures, found at:

www.ox.ac.uk/about/jobs/preemploymentscreening/.

The University's policy on retirement

The University operates an employer justified retirement age for all academic and academic-related posts (grade 6 and above), for which the retirement date is the 30 September immediately preceding the 68th birthday. The justification for this is explained at:

www.admin.ox.ac.uk/personnel/end/retirement/revisedejra/revaim/.

For **existing** employees any employment beyond the retirement age is subject to approval through the procedures: www.admin.ox.ac.uk/personnel/end/retirement/revisedejra/revproc/

There is no normal or fixed age at which **support staff** in posts at **grades 1–5** have to retire. Support staff may retire once they reach the minimum pension age stipulated in the Rules of the pension scheme to which they belong.

Equality of Opportunity

Entry into employment with the University and progression within employment will be determined only by personal merit and the application of criteria which are related to the duties of each particular post and the relevant salary structure. In all cases, ability to perform the job will be the primary consideration. No applicant or member of staff shall be discriminated against because of age, disability, gender reassignment, marriage or civil partnership, pregnancy or maternity, race, religion or belief, sex, or sexual orientation.

Benefits of working at the University

Training and Development

A range of training and development opportunities are available at the University. Further details can be found at www.ox.ac.uk/staff/working_at_oxford/training_development/index.html.

For research staff only: Support for Research Staff

There is a particularly wide range of support for career development for research staff. Please visit: www.ox.ac.uk/research/support-researchers to find out more.

Pensions

The University offers generous occupational pension schemes for eligible staff members. Further details can be found at www.admin.ox.ac.uk/finance/epp/pensions/pensionspolicy/.

Information for international staff (or those relocating from another part of the UK)

A wealth of information is available on the University's International Staff website for staff who are relocating to Oxford from abroad, at www.admin.ox.ac.uk/personnel/staffinfo/international/.

The University of Oxford Newcomers' Club

The Newcomers' Club is aimed at helping partners of newly-arrived visiting scholars, graduate students and academic members of the University to settle in and to meet people in Oxford.

Transport schemes

The University offers a range of travel schemes and public transport travel discounts to staff. Full details are available at www.admin.ox.ac.uk/estates/ourservices/travel/.

University Club and University Sports Facilities

The University Club provides social, sporting and hospitality facilities. It incorporates a Club bar, a cafe and sporting facilities, including a gym. See www.club.ox.ac.uk for all further details.

University staff can use the University Sports Centre at discounted rates, and have the chance to join sports clubs. Please visit www.sport.ox.ac.uk/oxford-university-sports-facilities.

Childcare and Childcare Vouchers

The University offers quality childcare provision services at affordable prices to its employees. For full details about the services offered, please visit www.admin.ox.ac.uk/childcare/. **NB: Due to the high demand for the University's nursery places there is a long waiting list.**

The University also offers nursery fee payment schemes to eligible staff as an opportunity to save tax and national insurance on childcare costs. Please visit www.admin.ox.ac.uk/childcare.

Disabled staff

The University is committed to supporting members of staff with a disability or long-term health condition and has a dedicated Staff Disability Advisor. Please visit www.admin.ox.ac.uk/eop/disab/staff for further details.

BUPA - Eduhealth

Bupa Eduhealth Essentials private medical insurance offers special rates for University of Oxford staff and their families www.eduhealth.co.uk/mini-site/.

All other benefits

For other benefits, such as free entry to colleges, the Botanic Gardens and staff discounts offered by third party companies, please see www.admin.ox.ac.uk/personnel/staffinfo/benefits/.
